

TS-DETECTOR

TEMPERATURE MONITORING AND SOUND DETECTION

ahlbergs.staging.westart.se/products/software/ts-detector

TS-detector is a supplementary module of T-complex monitoring system. It is designed for the non-stop remote monitoring of potential failure events that can occur during the operation of machines or during the performing of dangerous processes. System quickly identifies undesirable changes of monitored parameters and immediately alerts an operator of the risk situation. If necessary, the module TS-detector is able to operate also as a stand-alone system. It is also ready for cooperation with third-party control systems.
